interoperable
data access

added value
services

new
data

*Setting the basis of a
European Planetary
Science VO*

*Distribution of db
developed during
the program*

Planetary Science VO — Objectives

- Making data search in archives easy
- Allowing quick-look visualization of data
- Allowing external users to include their data

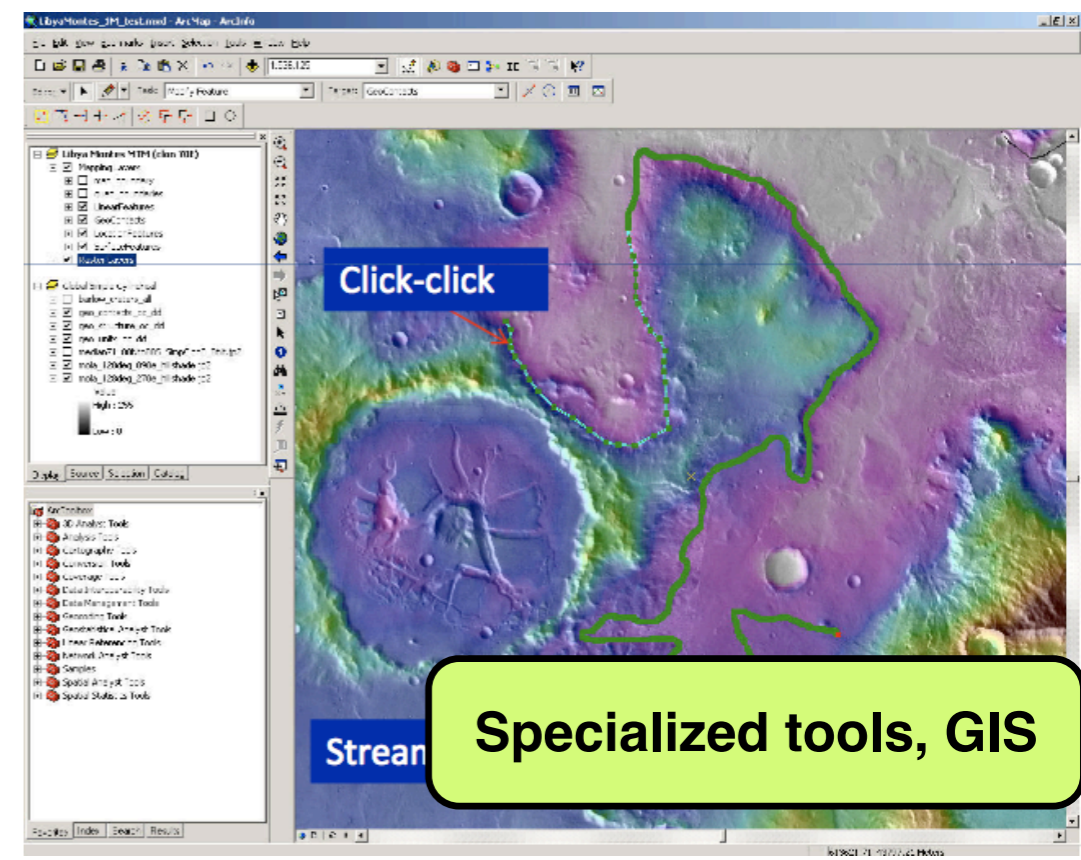

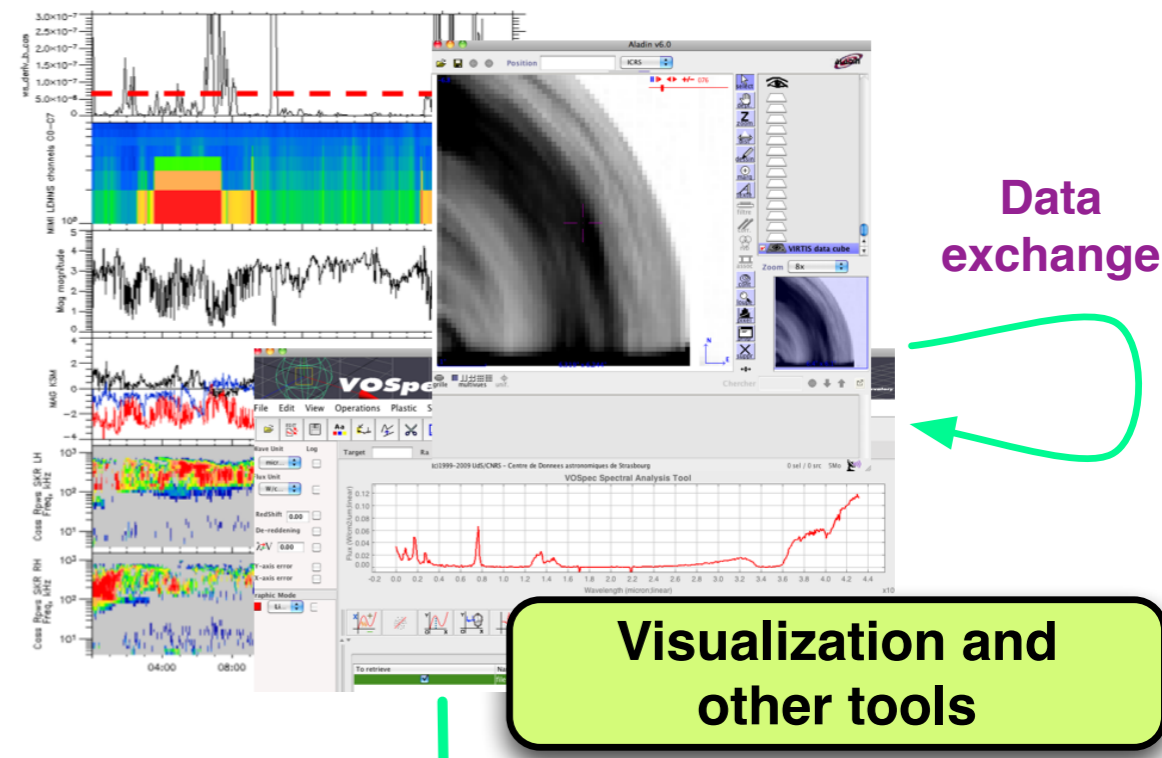

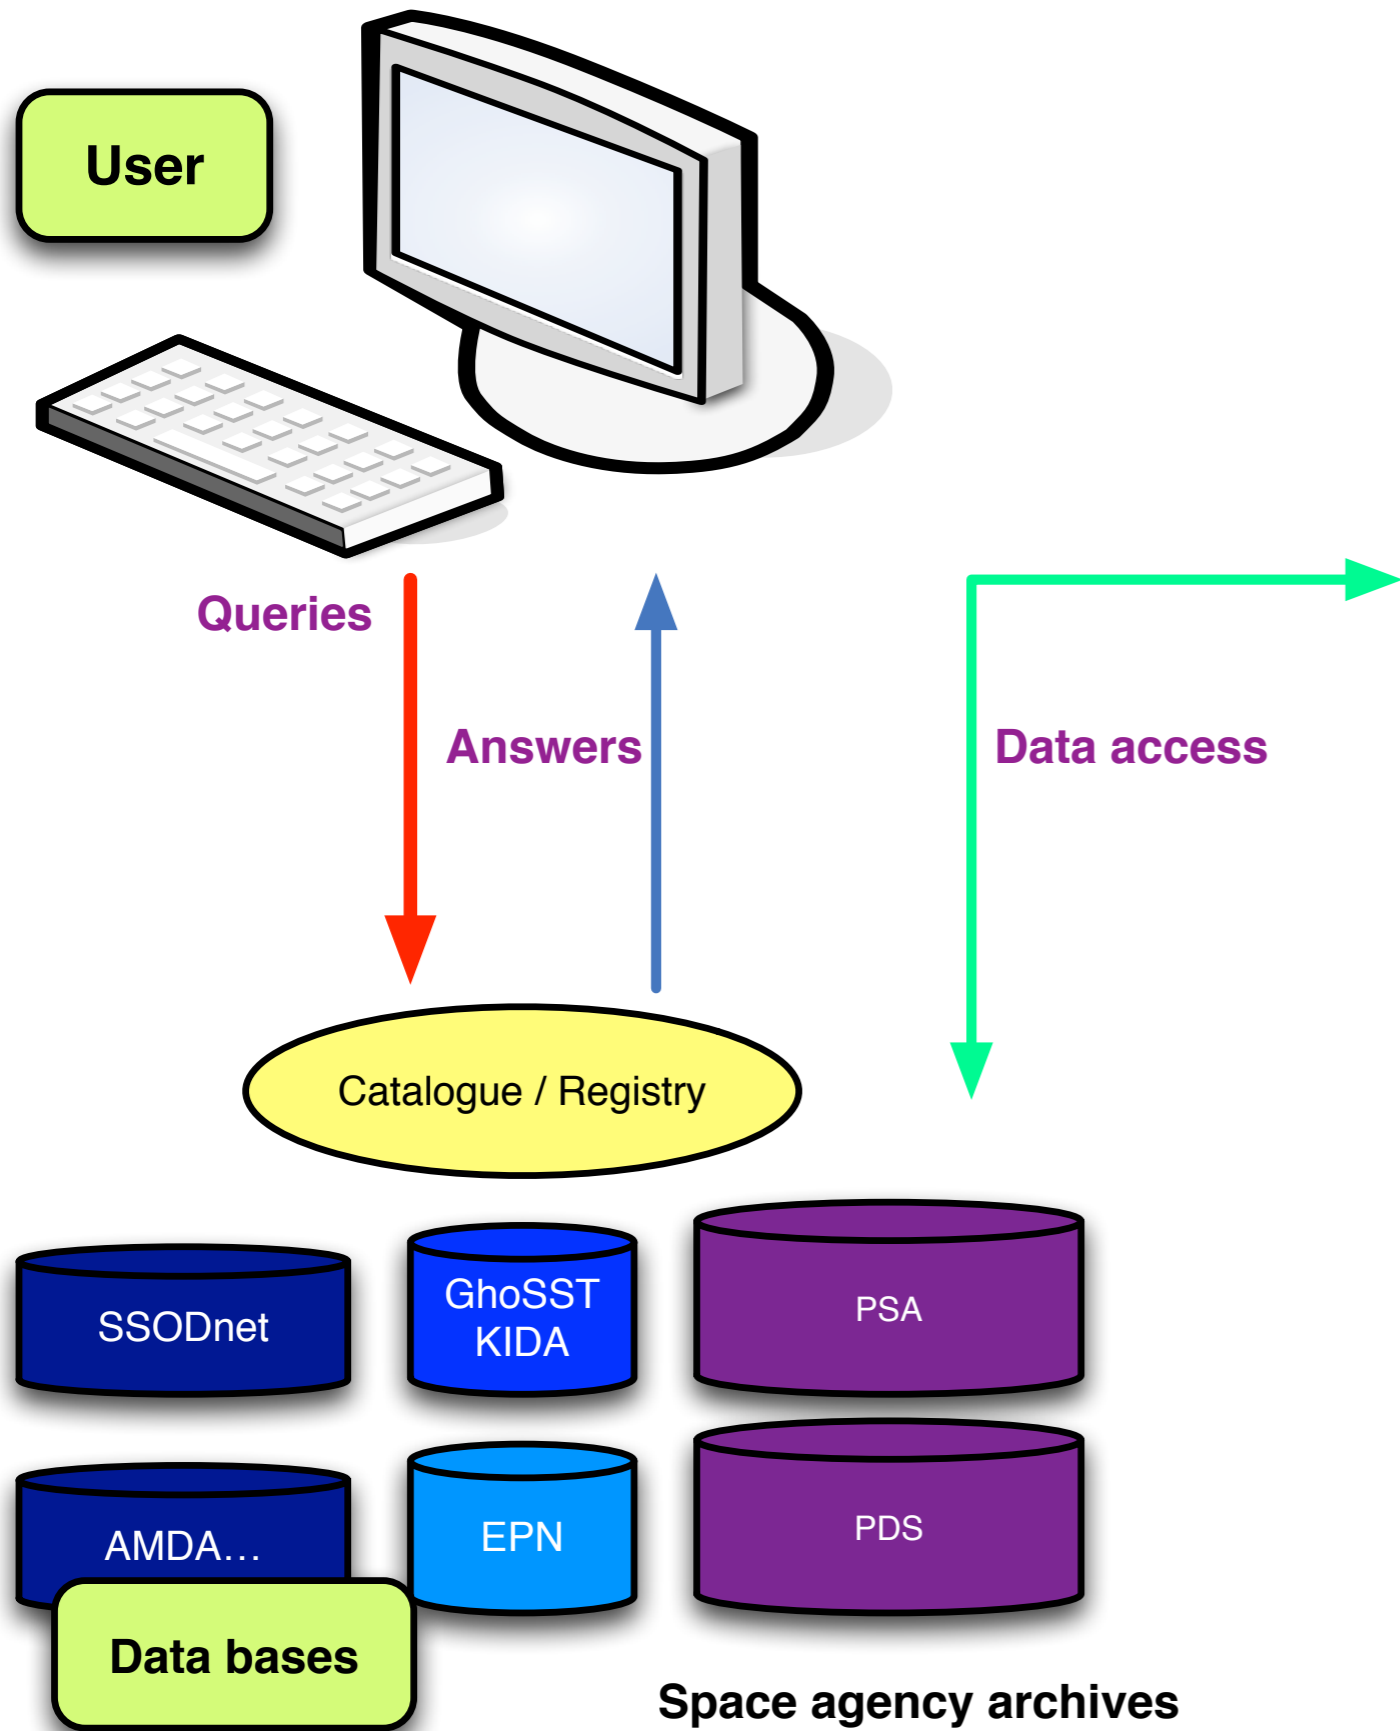

Initial set-up in JRA4

- Making "small" derived data sets accessible
- Developing specific processing tools

Contributions by external users

=> Provide services to the community, not paperwork

Overall architecture

Variety of data

- Perimeter of data to be accessed

 - Ground-based: moving objects on dark sky

 - Space-borne (PSA/PDS), including HR imaging

 - Time series

 - Parameter lists

 - Atmospheric / 3D

 - Volume (internal structure, electro-magnetic fields)

 - Variations with time (secular, seasonal, local time)

 - Experimental / lab (including data from EuroPlaNet + external)

- Physical data access:

 - Main issue: existing PDS archives (no software!)

 - FITS (sometimes)

 - + funny formats

Contributors to EuroPlaNet / IDIS

OV-Paris (=> Le Sidaner et al. PV2011)
CDPP/CESR (=> André et al. PV2011)
DLR
IASF/INAF
LATMOS/IPSL
IWF-Graz
IPAG, Obs. Bordeaux (=> Schmitt et al. EPSC)

EuroPlaNet-RI / JRA4

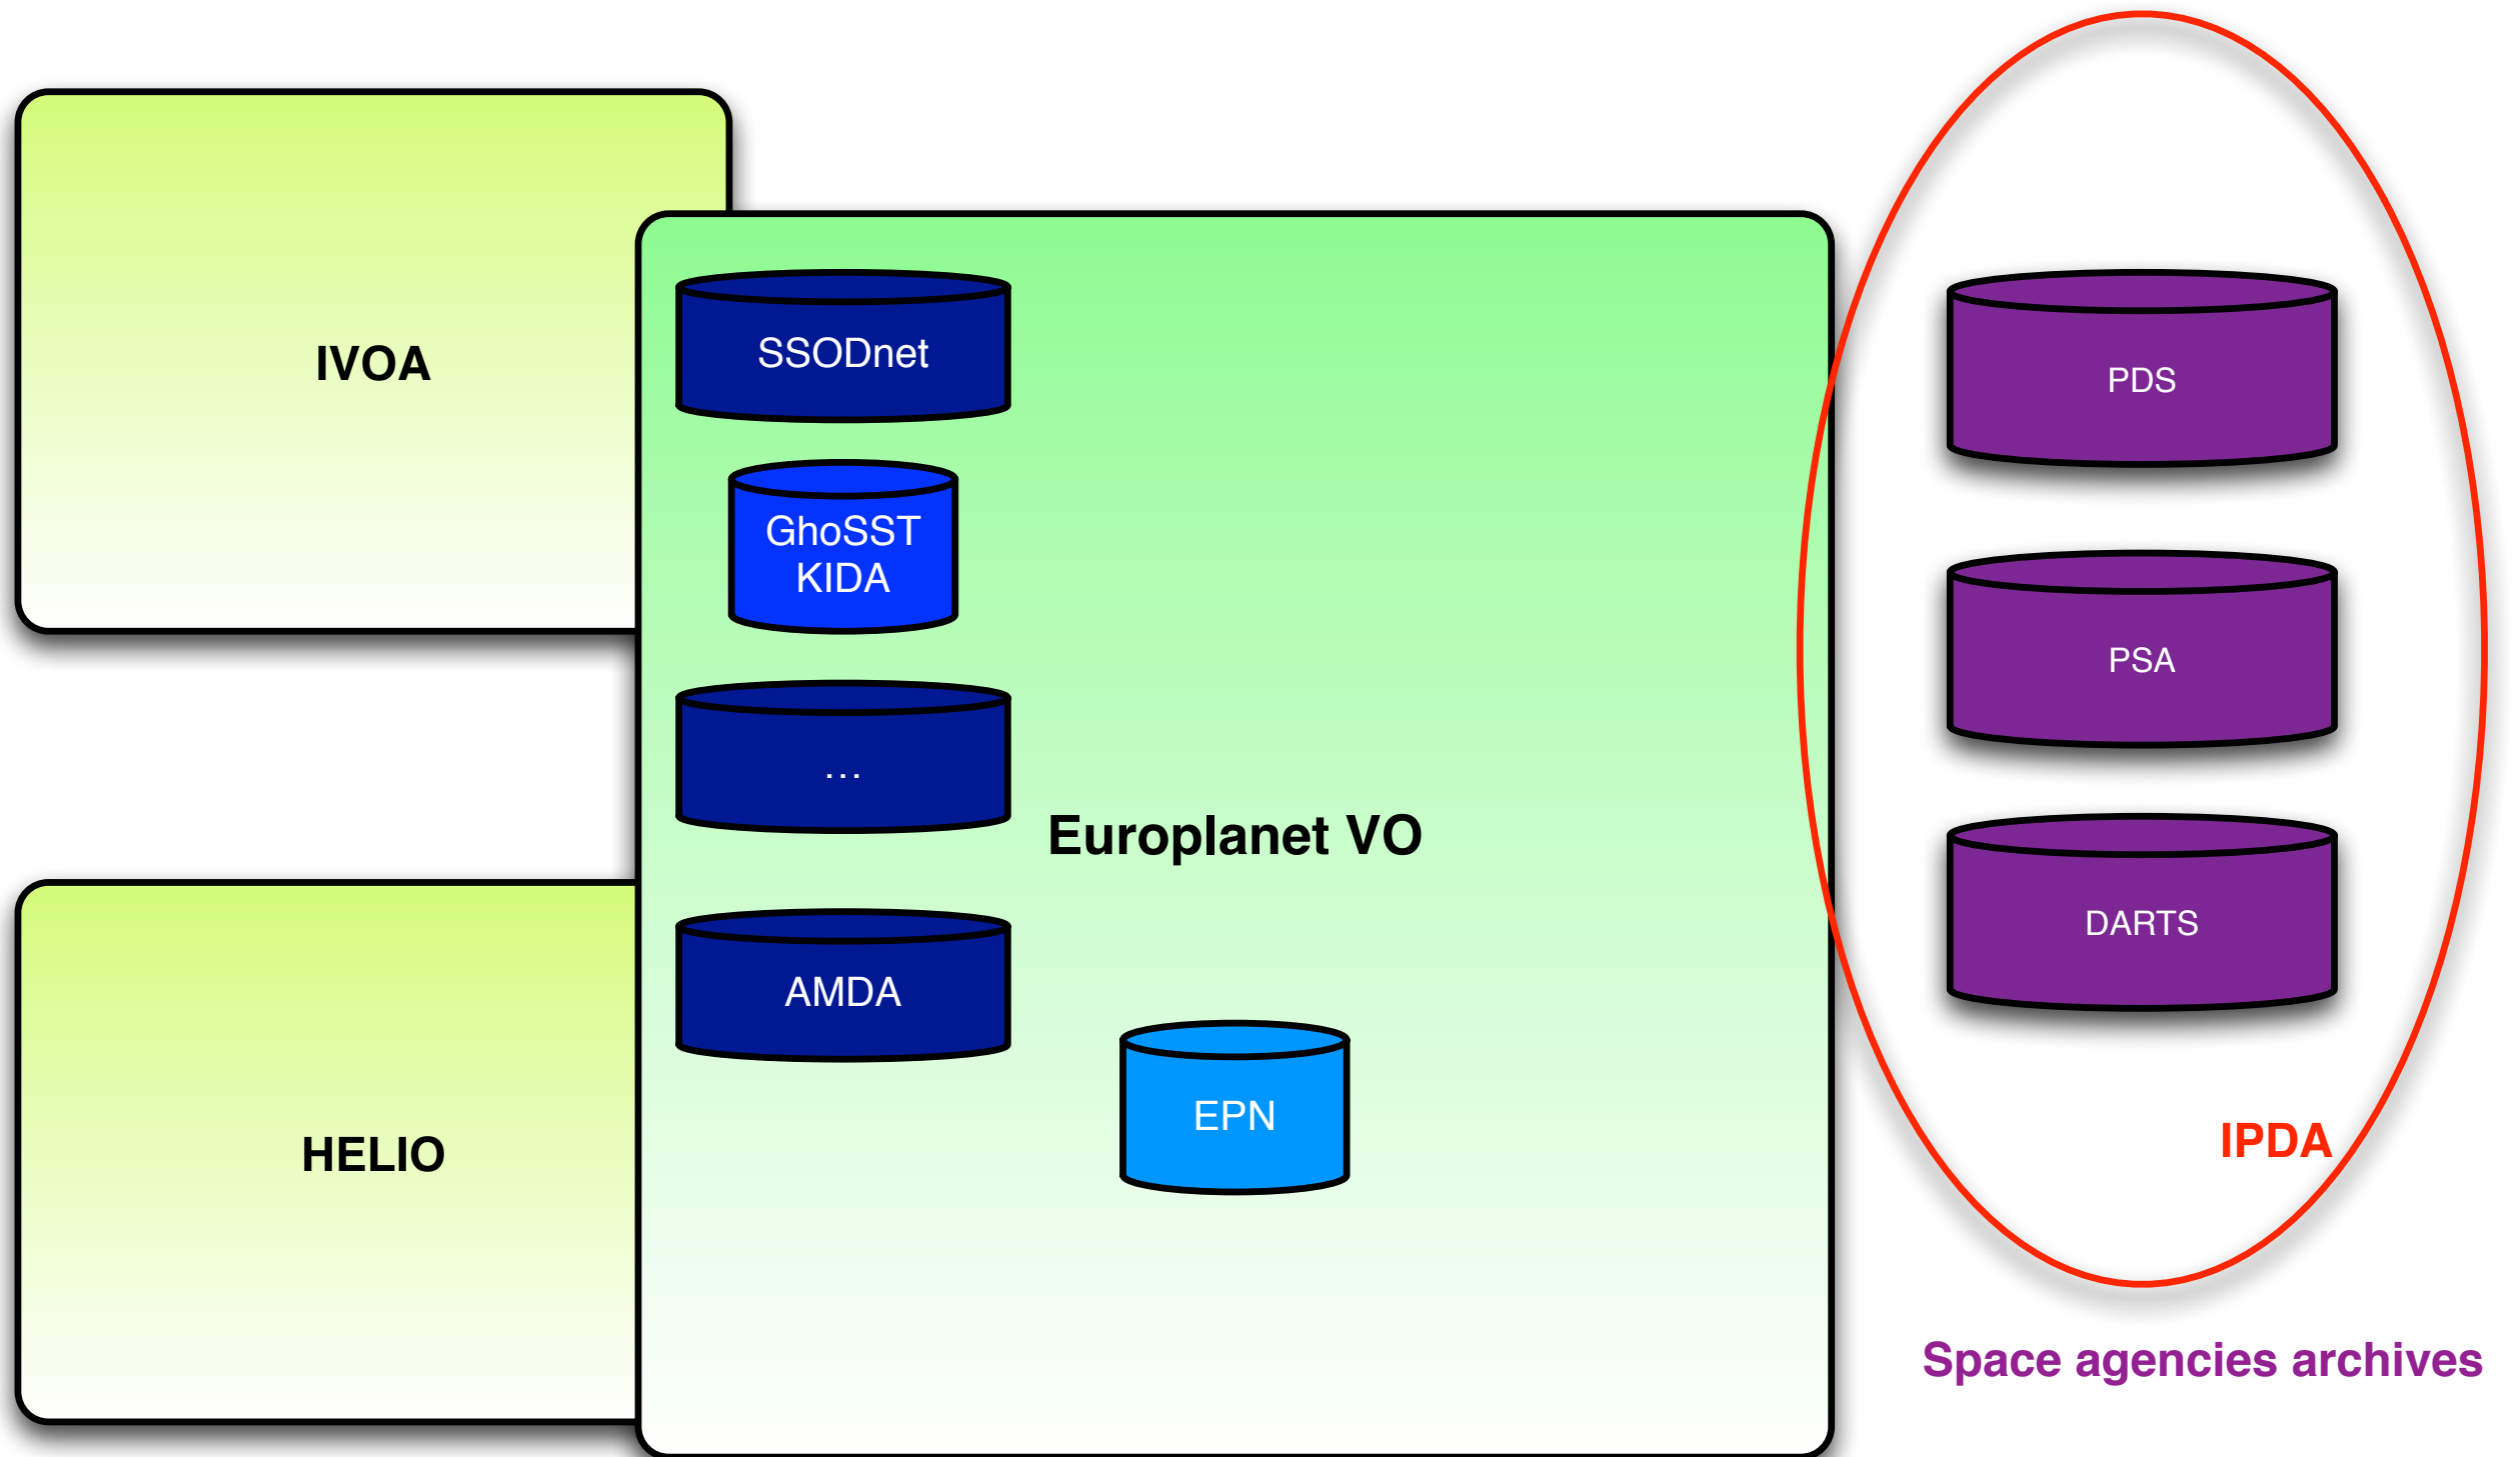

ESAC/ESA
CNES (=> Malapert et al. PV2011)
IDES/CNRS (=> Marmo et al. ADAS XXI)
...

External contributions

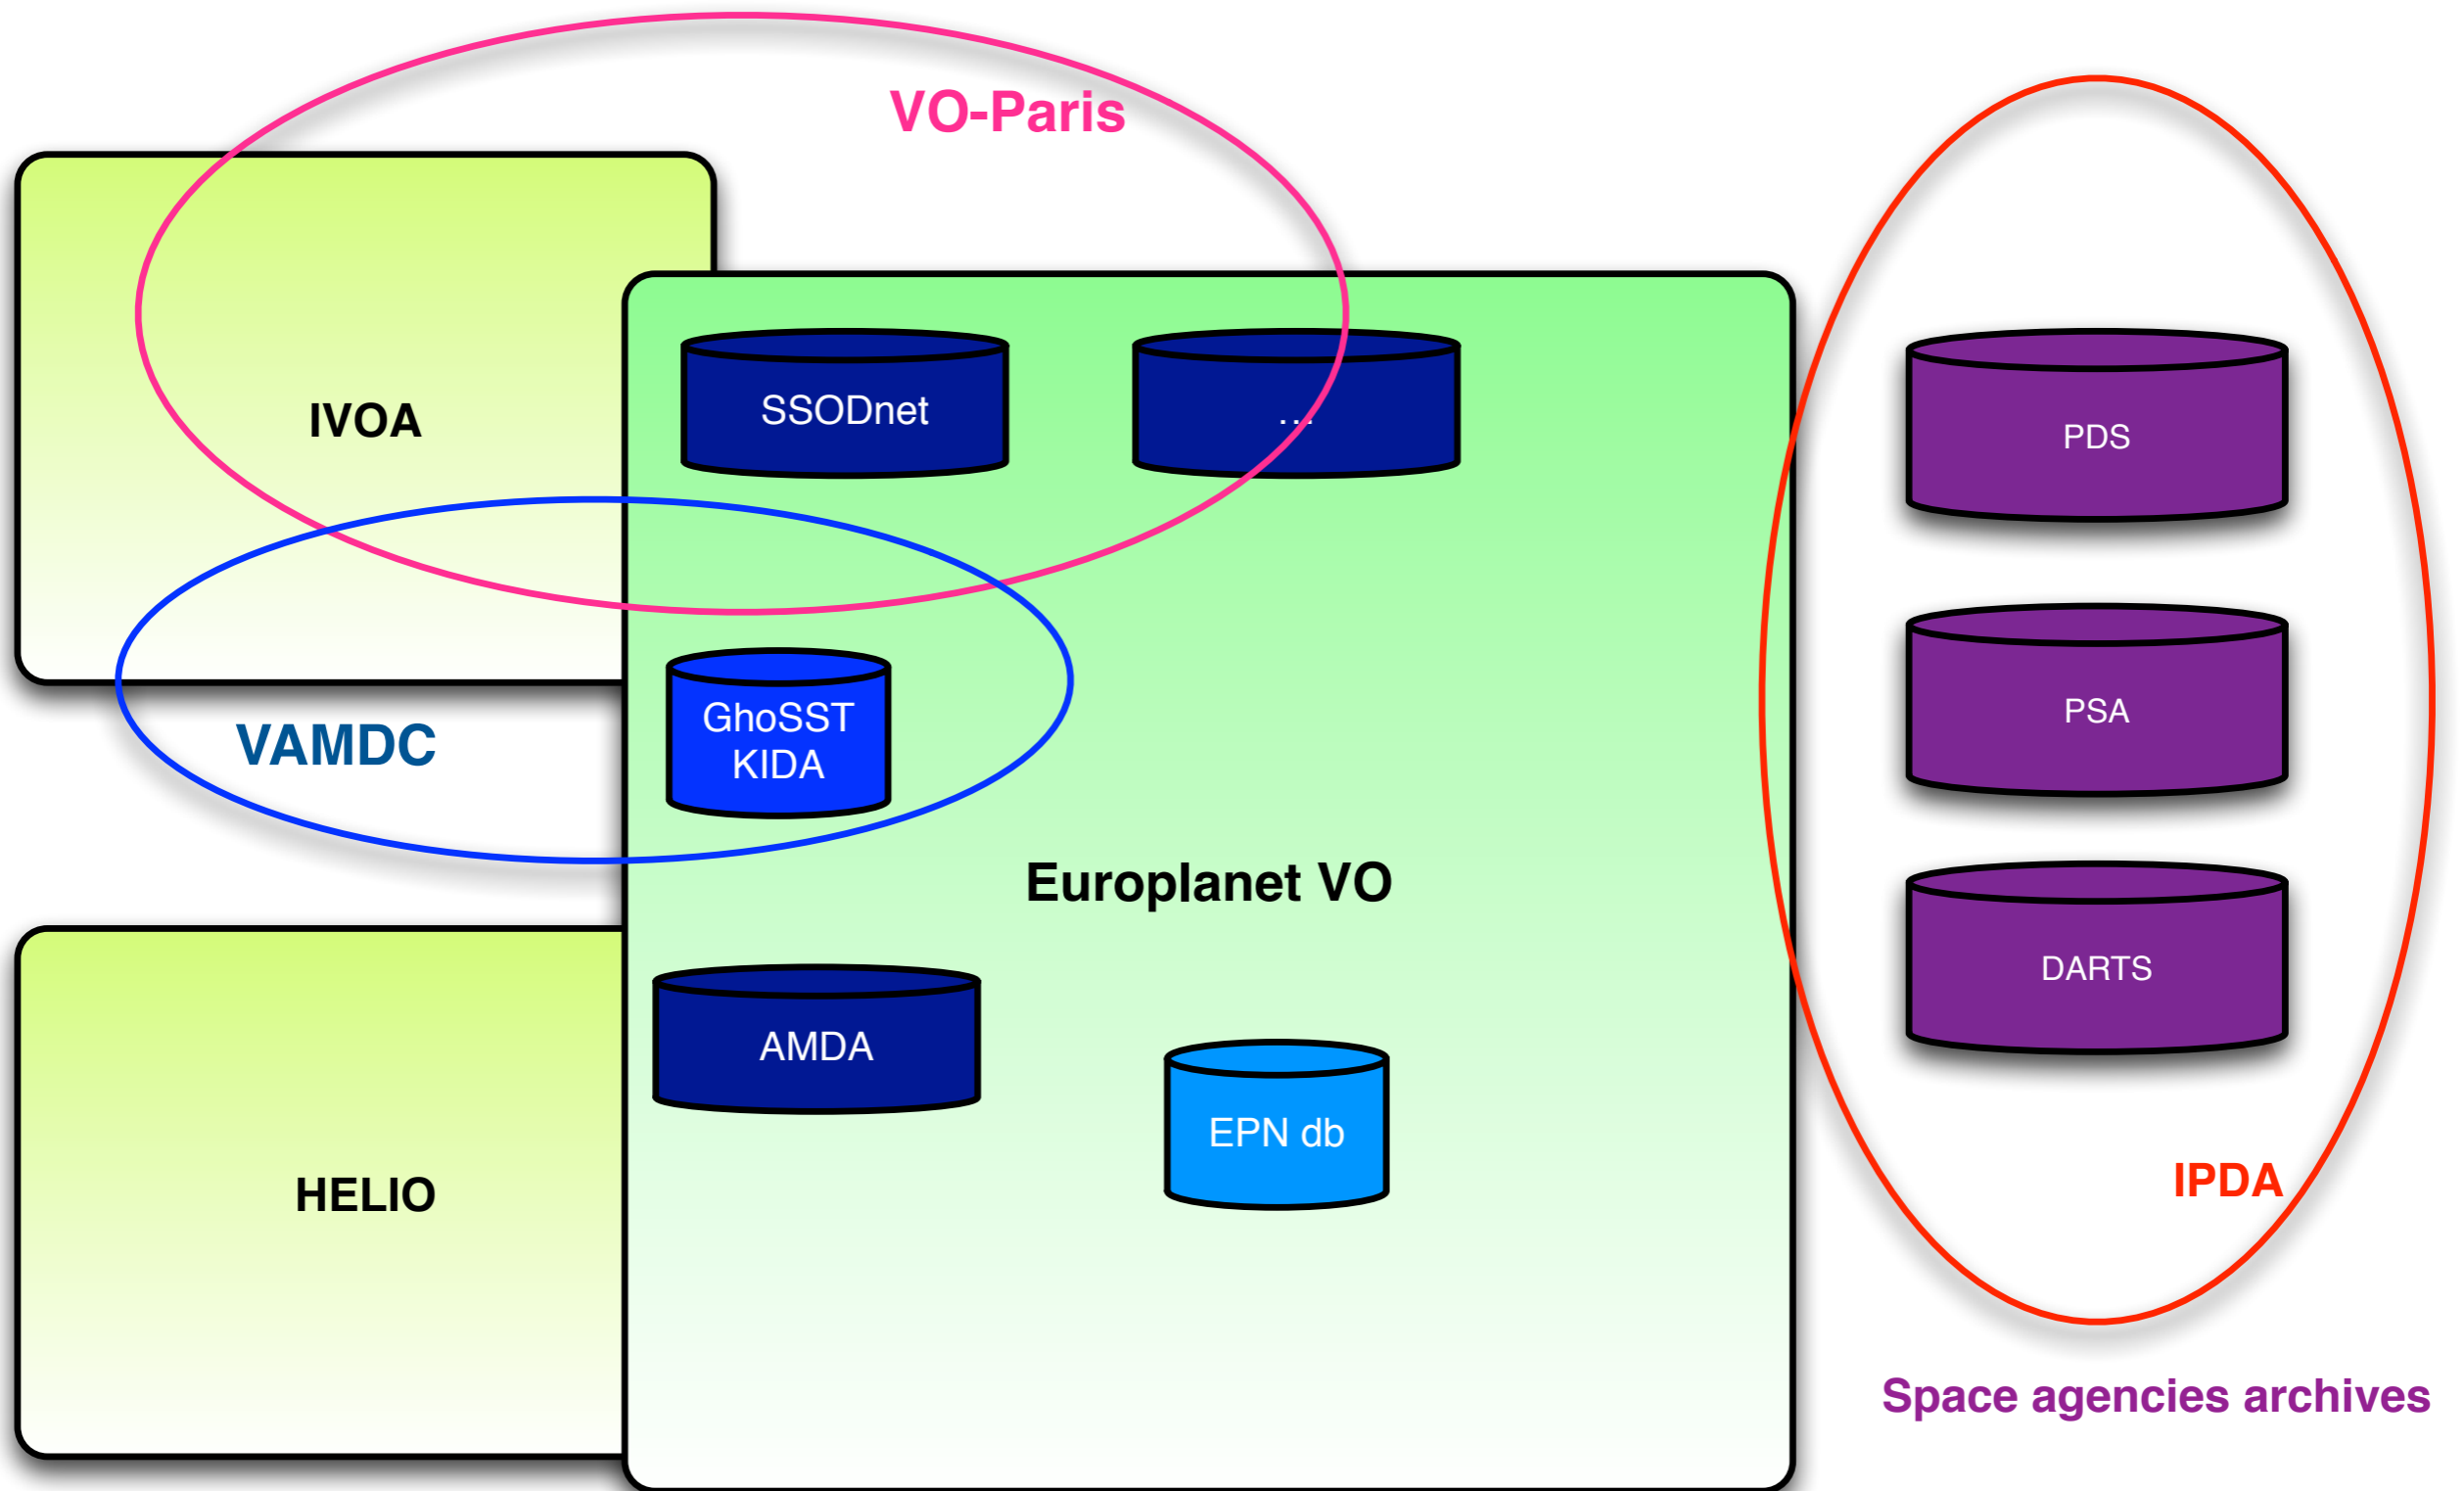

IVOA
IPDA
PDS / NASA

Context

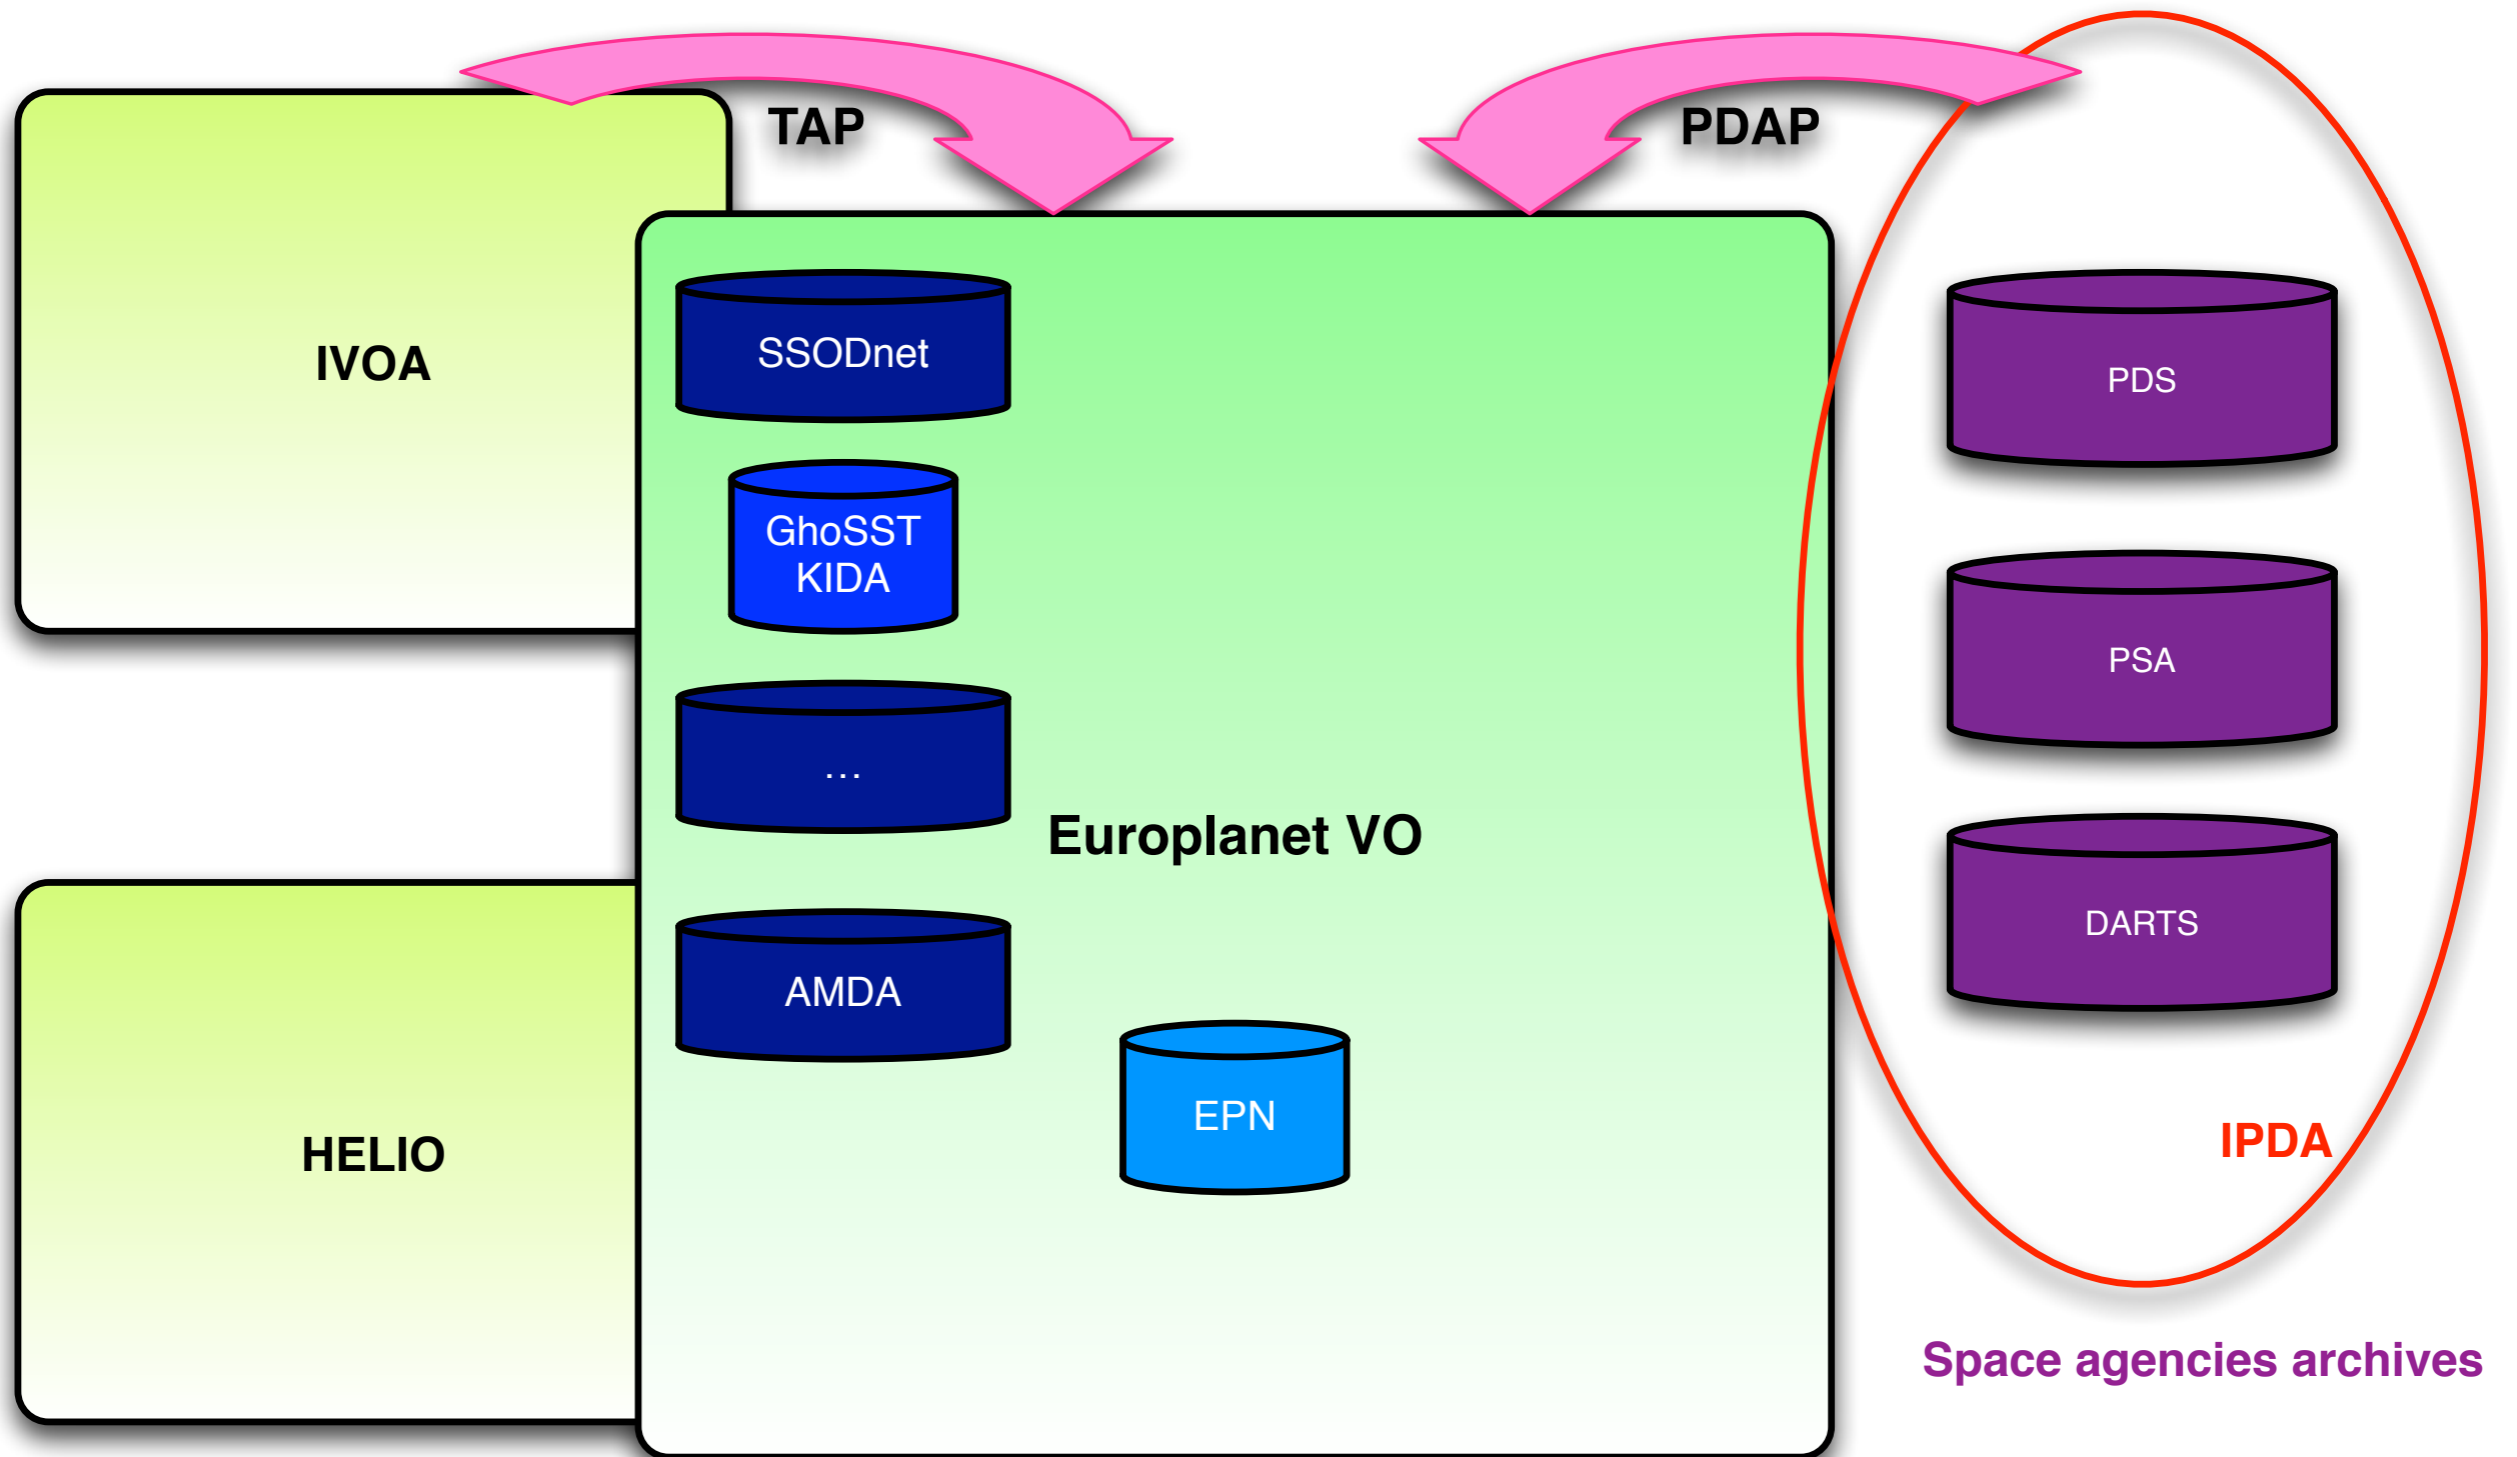

International context

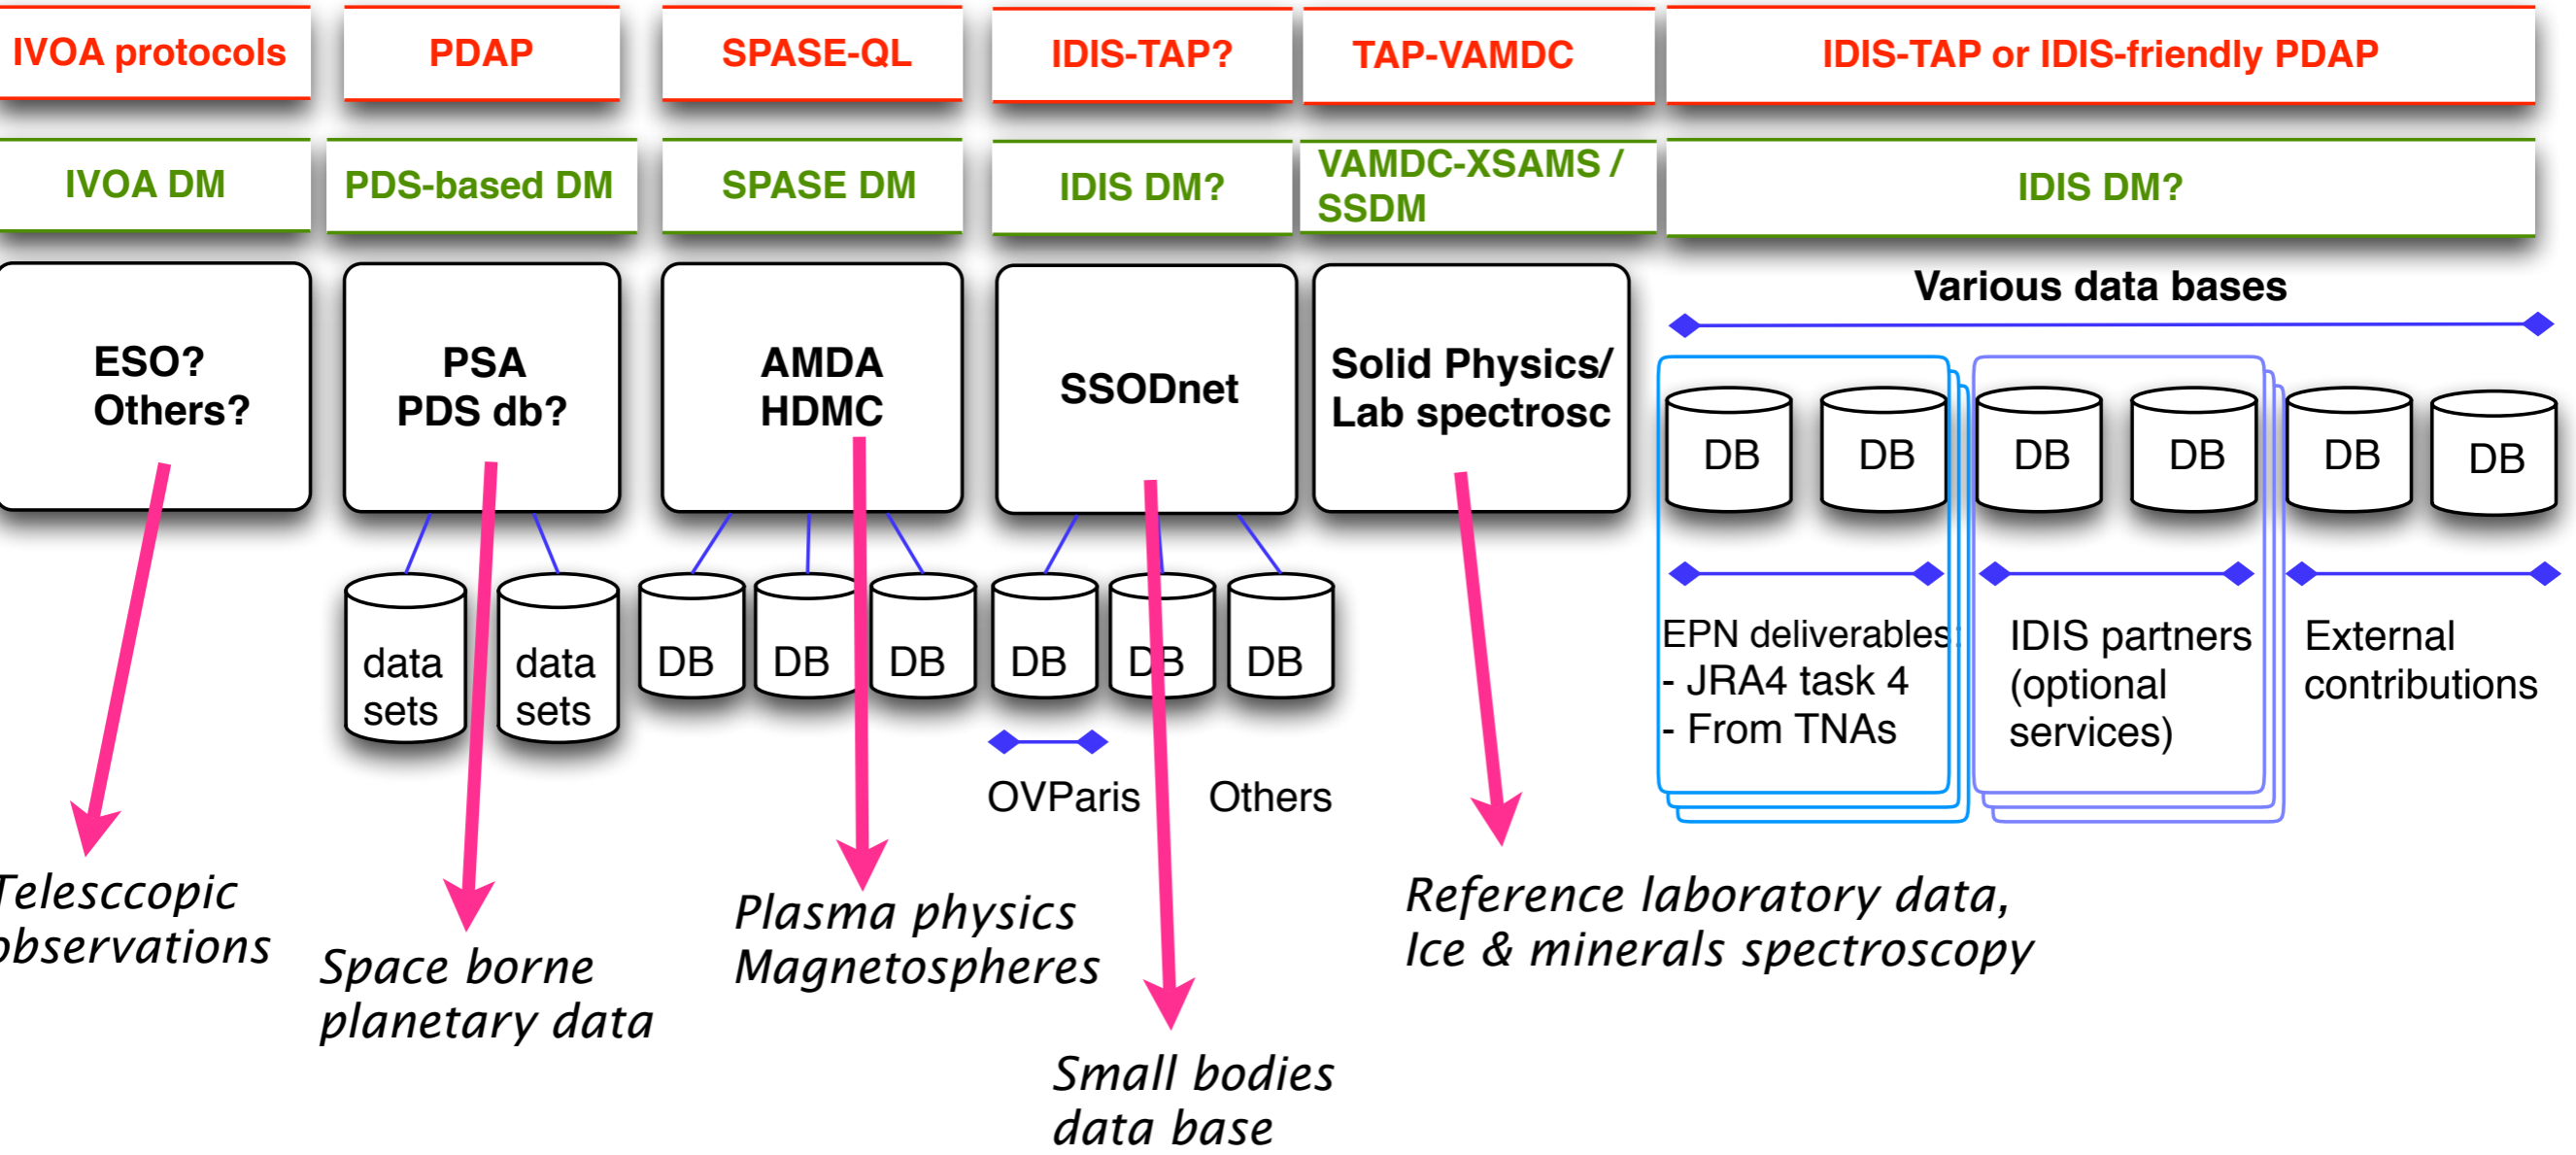

International context

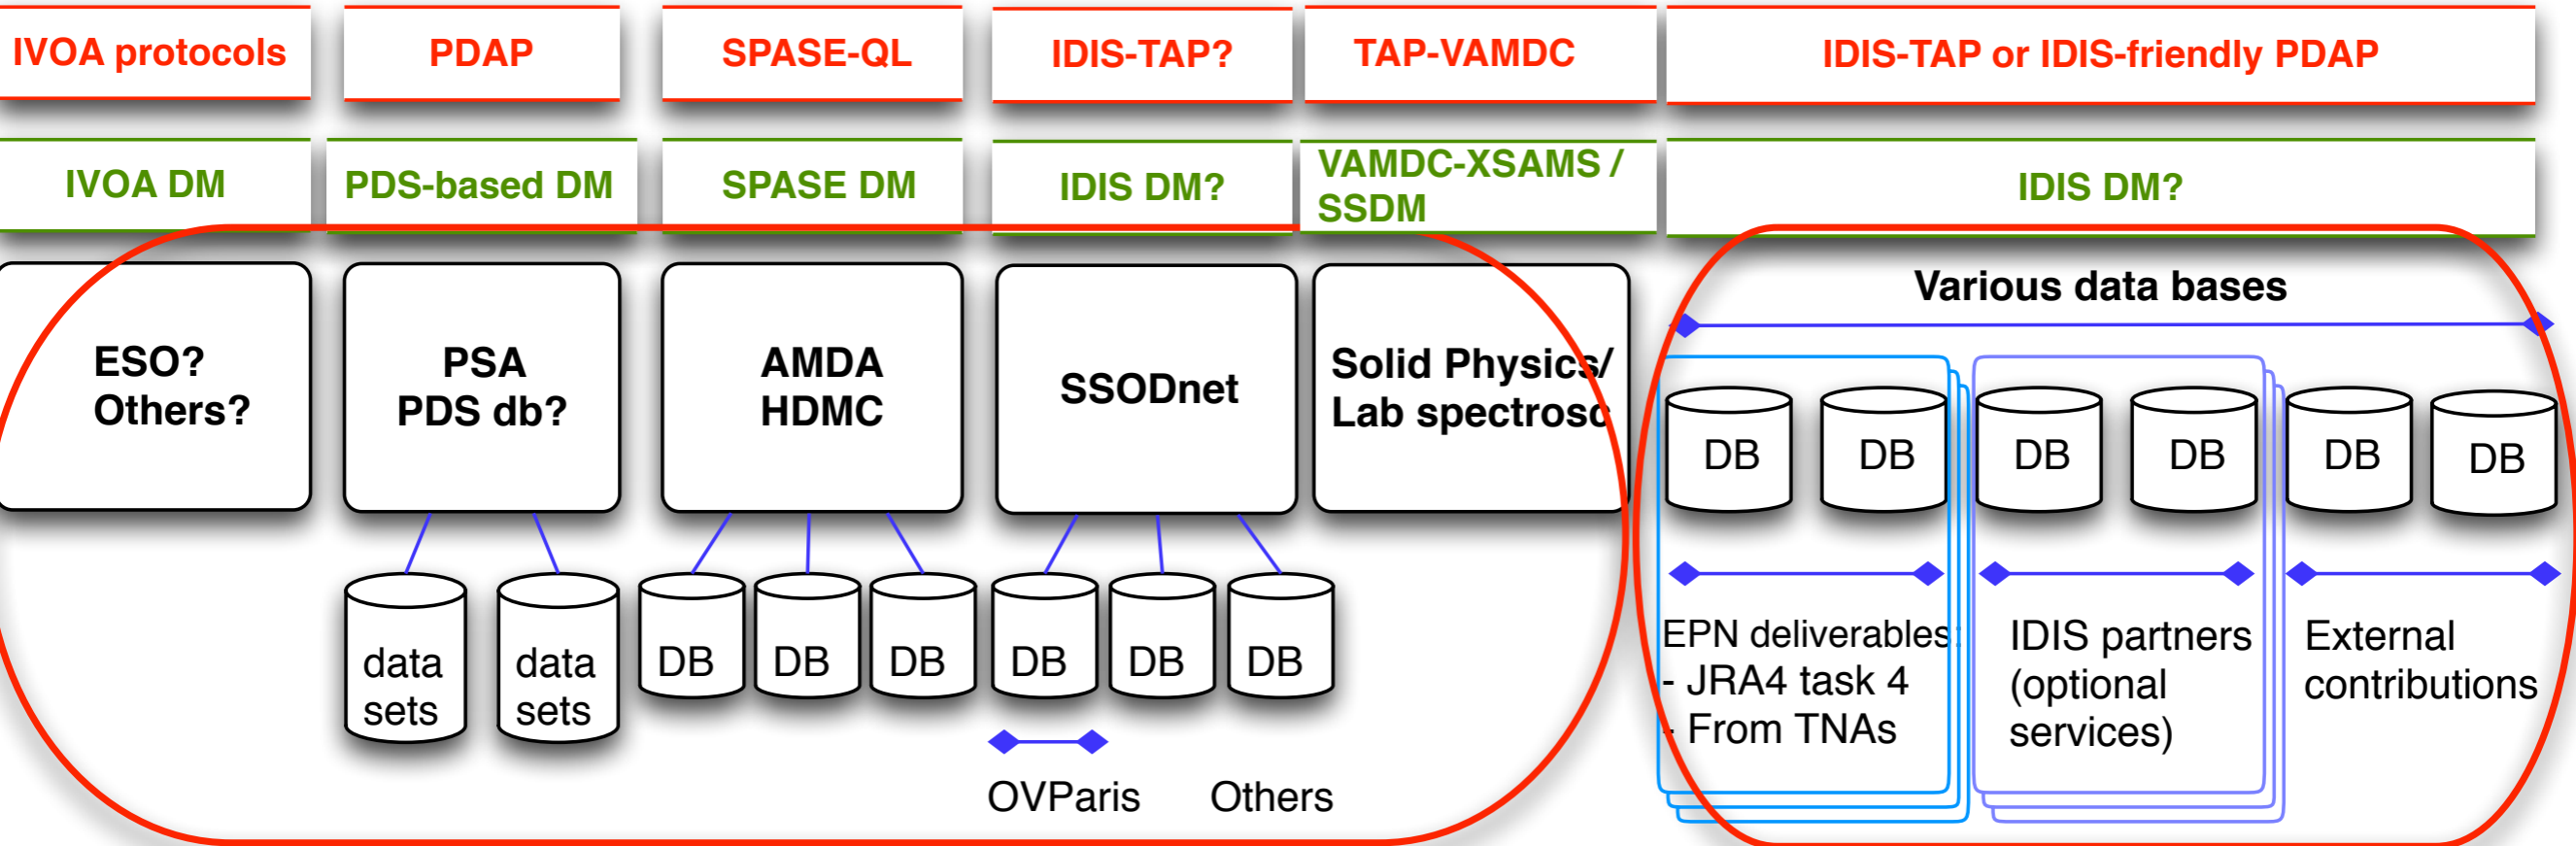

International context

Data scope / access

Data scope / access

Big data repositories

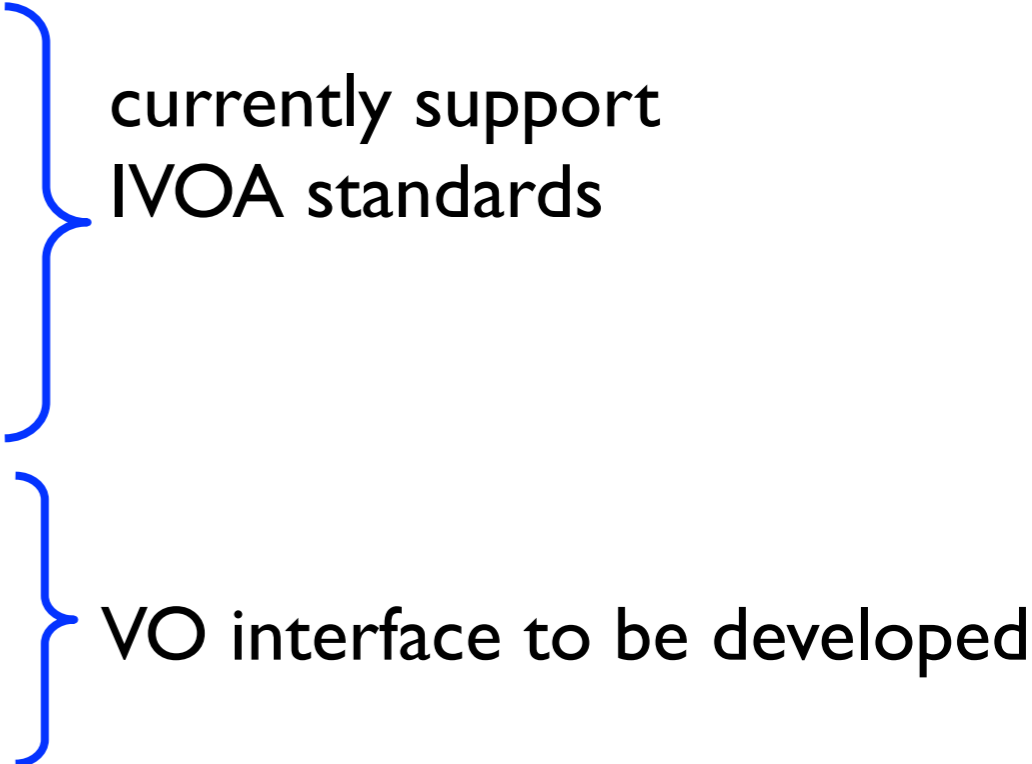

Individual data bases + collections related to EPN

➔ *Big services: usually have interface layer, DM + protocol*
Smaller, topical services: specific DM + protocol required for IDIS

OV-Paris data services

Existing DB and DB in development:

- SSODnet (small bodies data service)
- Natural satellites data centre
- Comet ephemeris
- Extrasolar Planets Encyclopedia
- Natural Satellites Center
- Atmospheric profiles of Mars & Titan
- Comet spectroscopy from Nançais
- Historical images cured in Meudon (IAU project)

Services:

- Skybot (inverted ephemeris)
- Miriade / SSO ephemeris
- Solar System name resolver

All DB are accessible from VO-Paris IDIS node

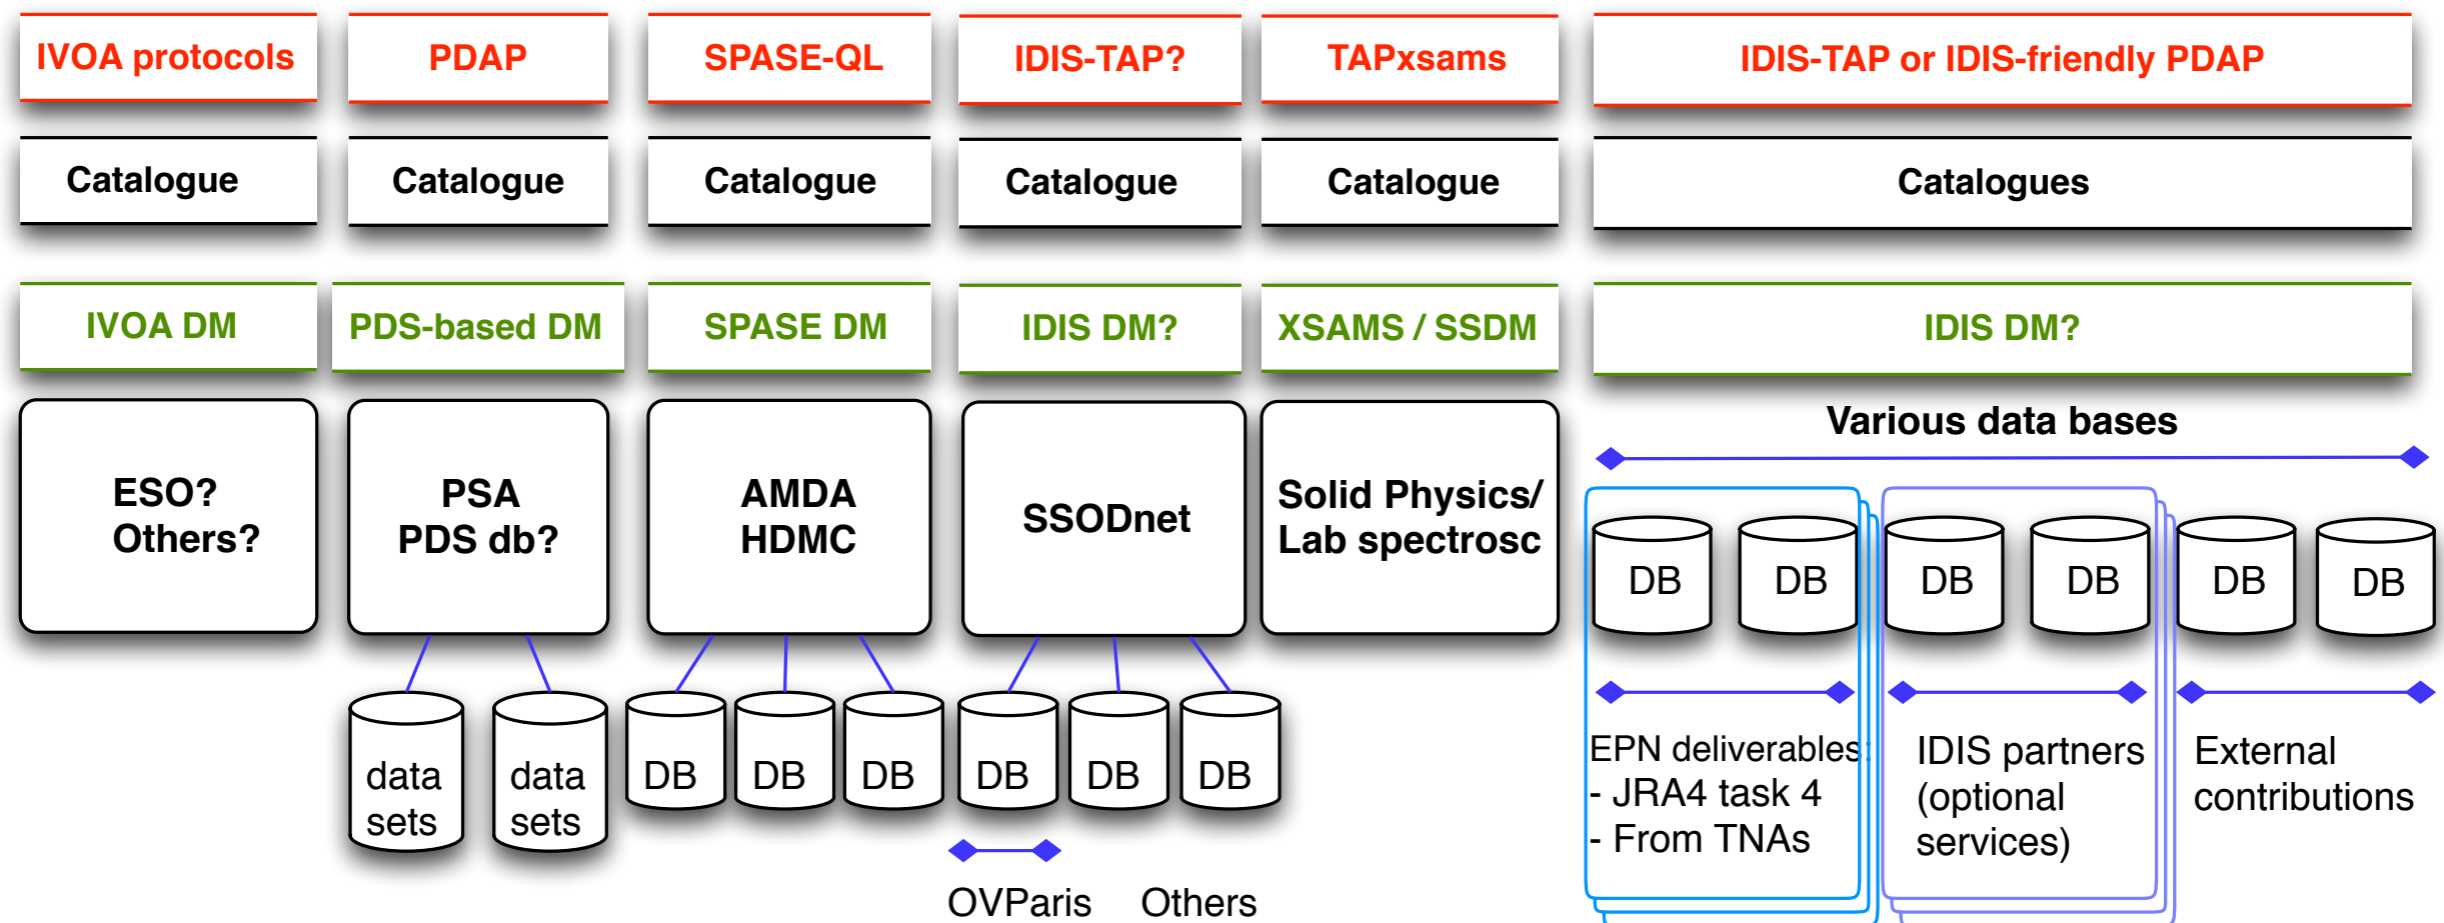

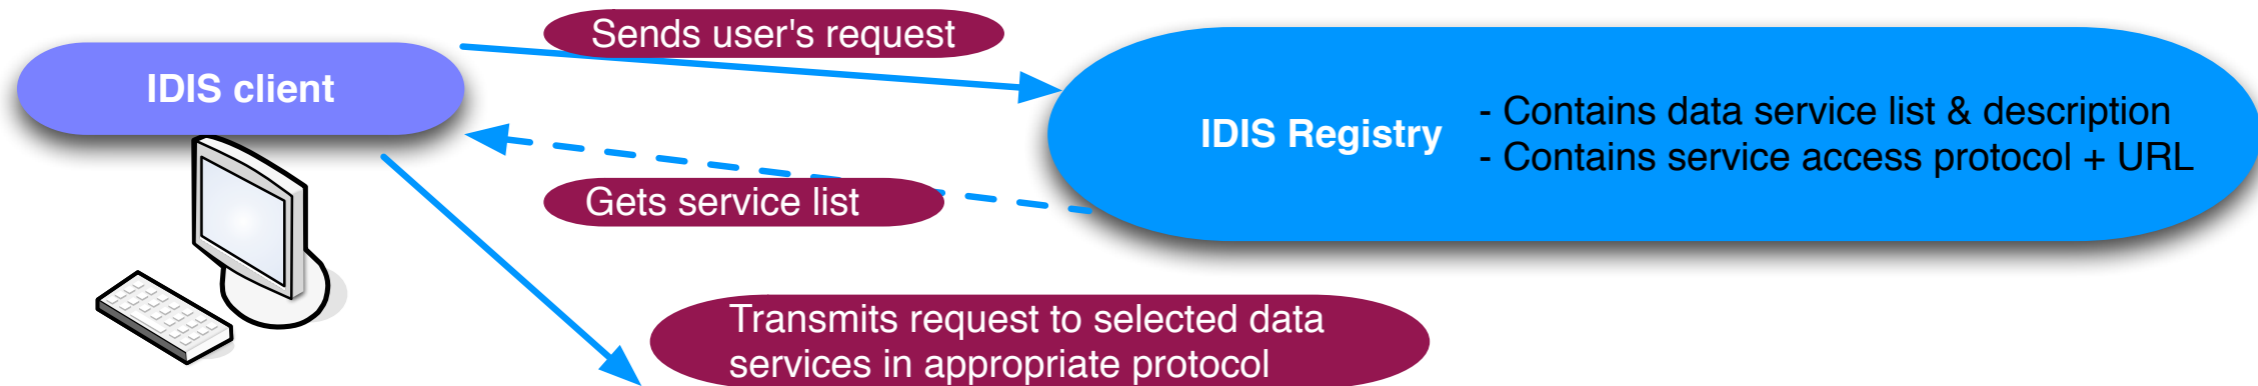

Collection of users feedback / requirements:

- French annual workshop
- (Europlanet users advisory board)

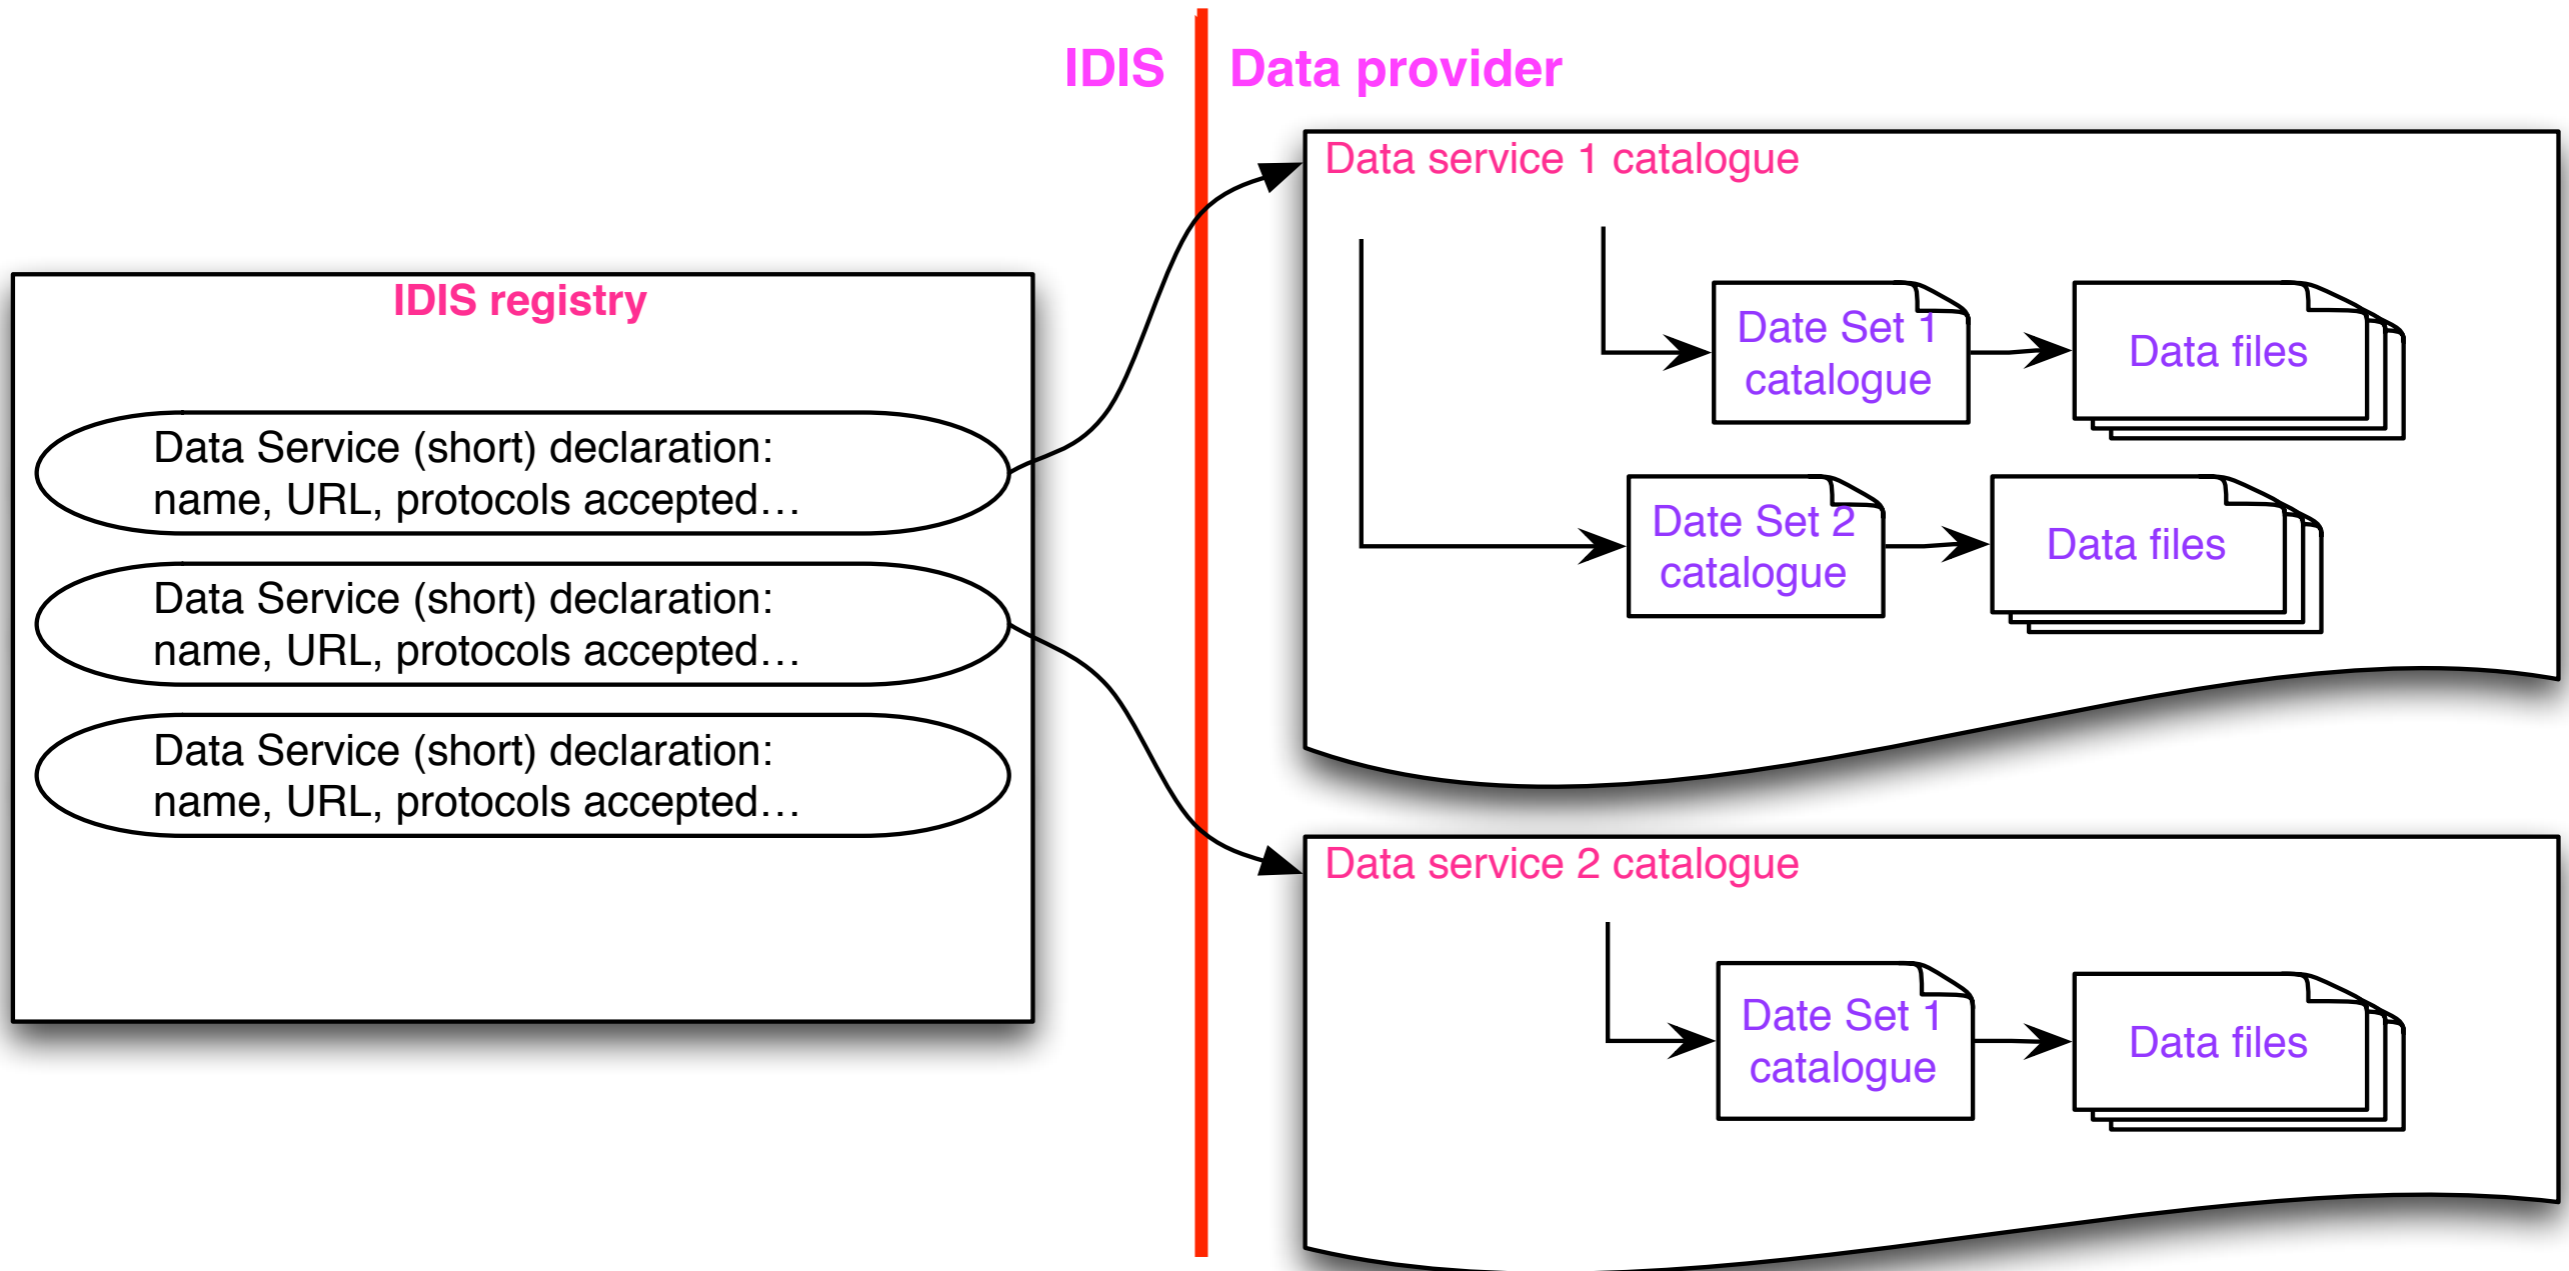

<http://voparis-europlanet.obspm.fr/>

Registry / catalogue

Registry / catalogue

- Contains description of data services only
- IVOA compliant  *re-use IVOA registry at VO-Paris?*

IDIS client

IDIS Registry
- Contains service list & description
- Contains service access protocol + URL

Sends user's request

Returns service list

Transmit request to selected data services in appropriate protocol

Returns URL of data files + access method

IDIS-TAP?

Catalogues

IDIS DM?

Various data bases

EPN deliverables
- JRA4 task 4
- From TNAs

IDIS partners
(optional services)

External contributions

IDIS client

IDIS Registry
- Contains service list & description
- Contains service access protocol + URL

Sends user's request

Returns service list

Transmit request to selected data services in appropriate protocol

Returns URL of data files + access method

IDIS-TAP?

Catalogues

IDIS DM?

Various data bases

EPN deliverables
- JRA4 task 4
- From TNAs

IDIS partners
(optional services)

External contributions

IDIS-TAP?

Catalogue

IDIS DM?

SSODnet

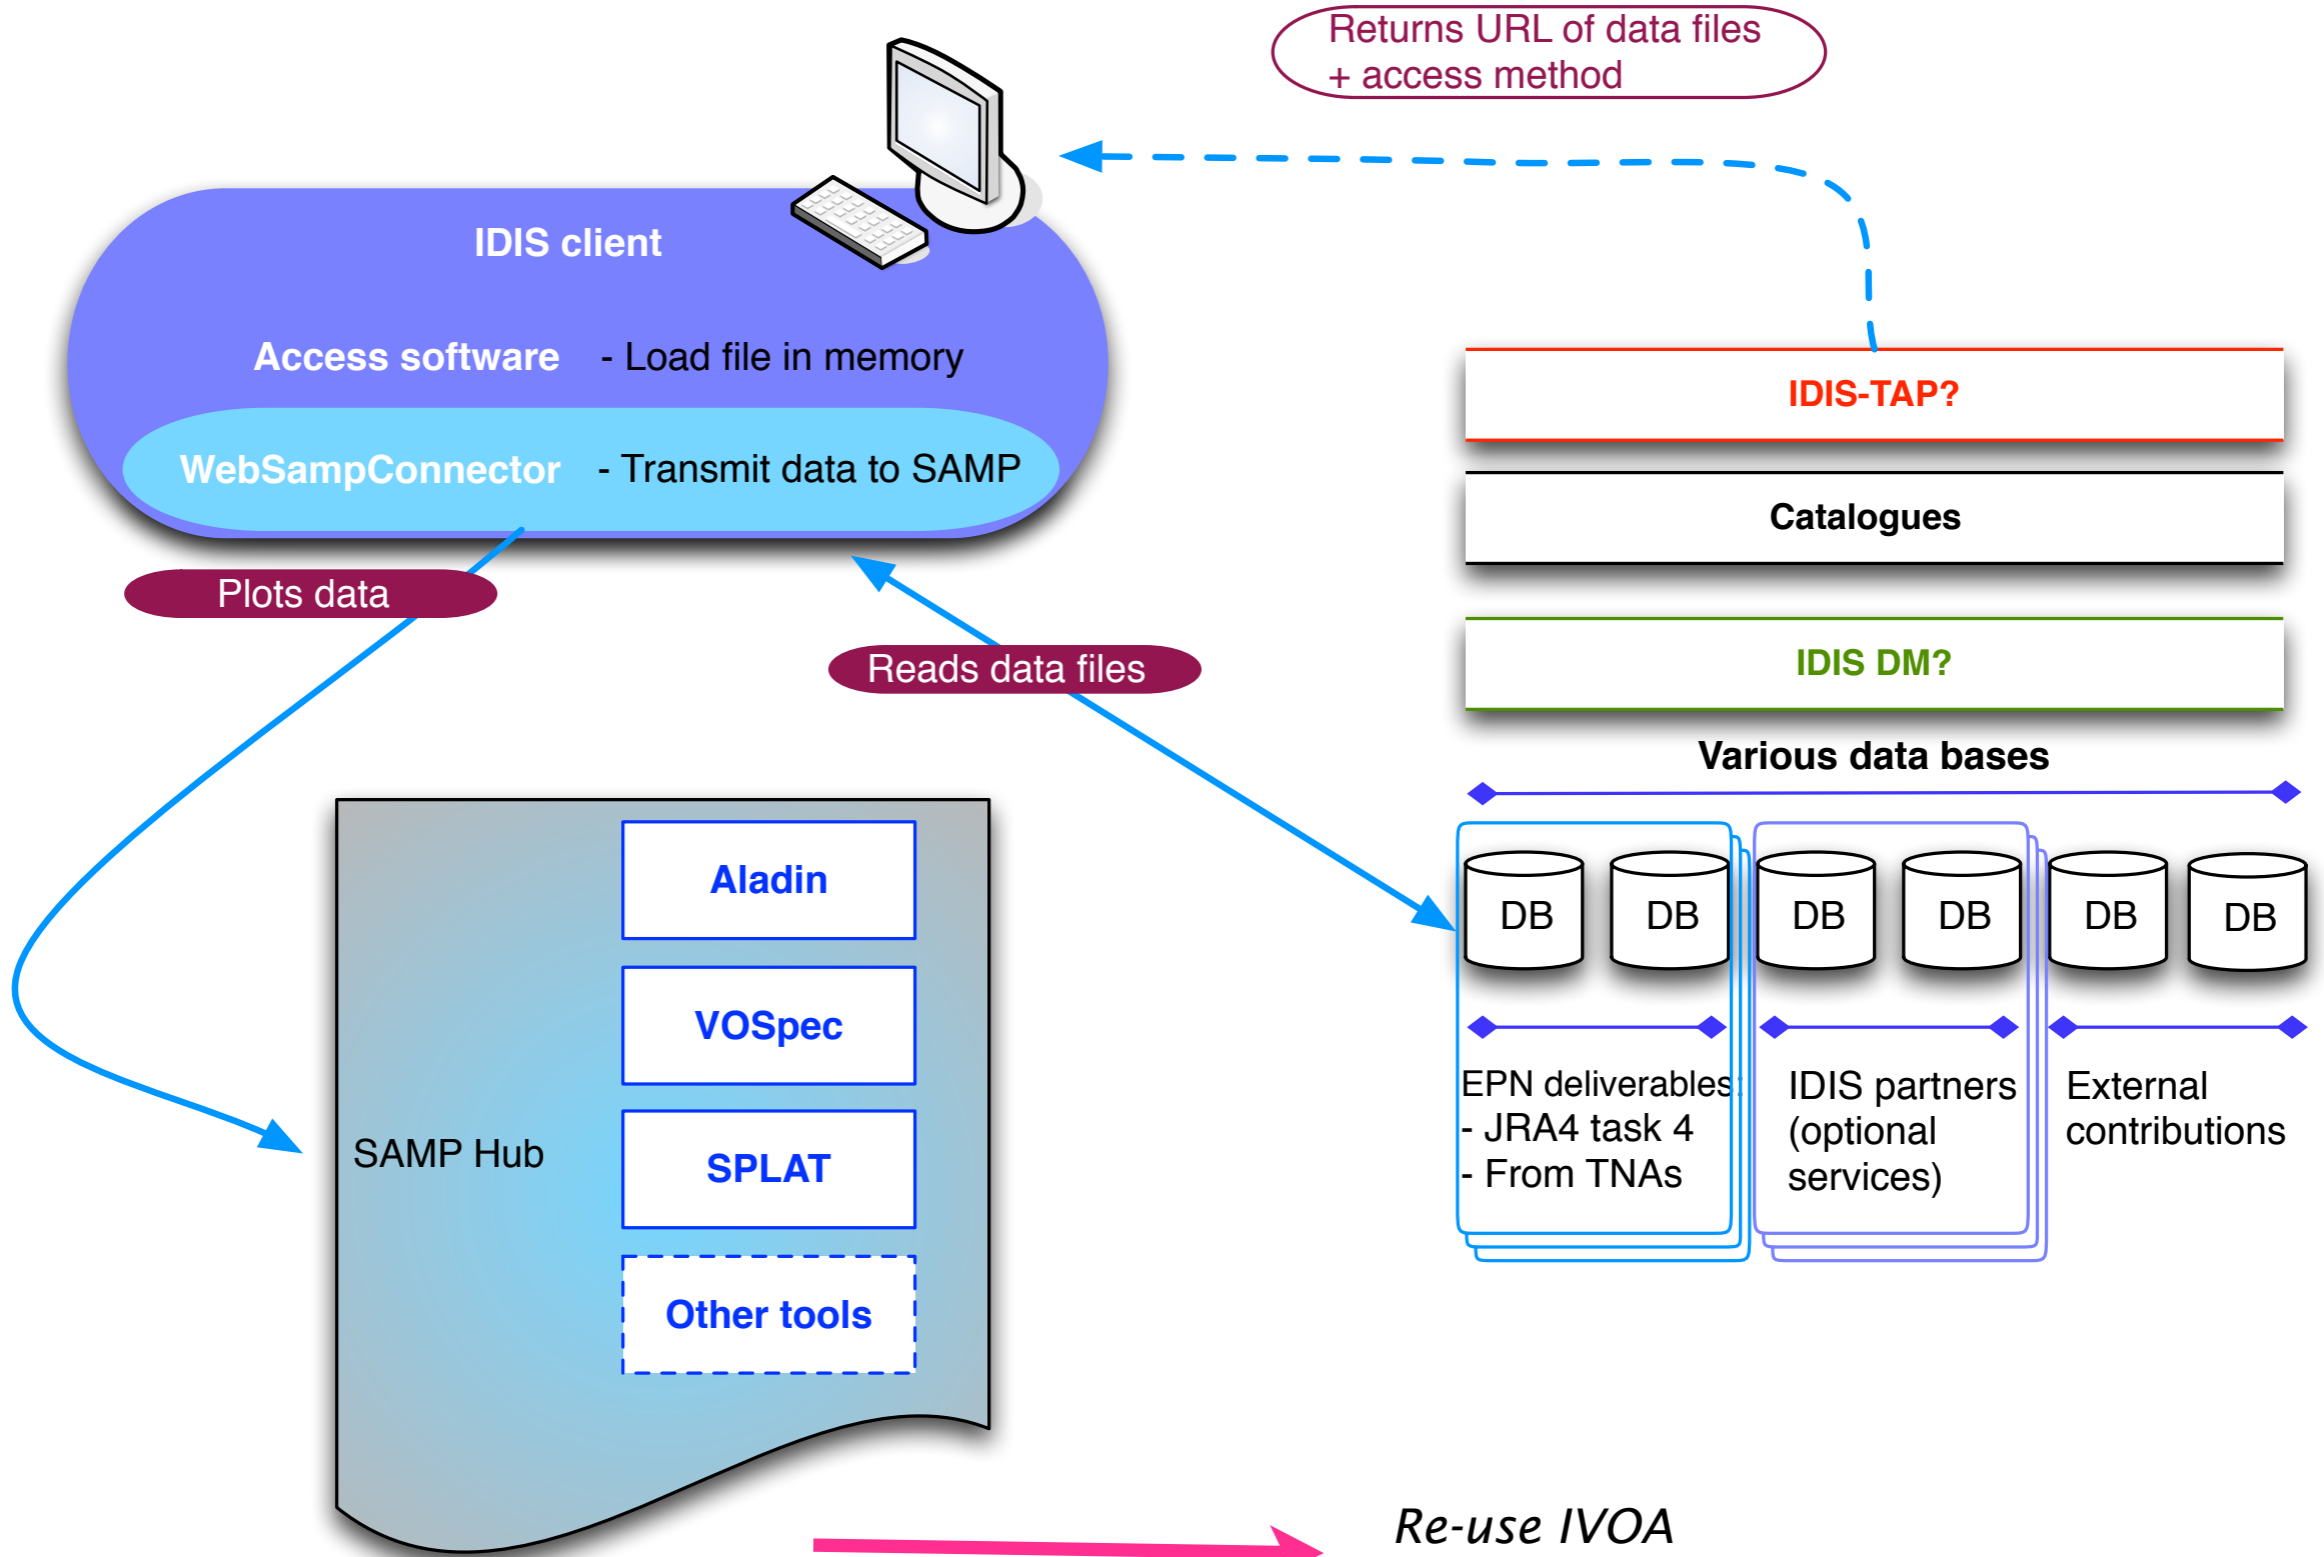

OVPariS Others?

Answers formatted as VOTables

SItools2 ?

- Provides data management services
- Helps mapping data in Data Model
- Provides catalogue search functions
- Implements basic VO protocols
- Implements WMS service (for Earth observation)

Visualization Services

Re-use IVOA quicklook tools
Update VOSpec for Pl. Science (in discussion with ESAC)

Looping the loop

Define IDIS DM

DM working group (animated B. Cecconi)
IVOA compliant (thanks to J. Berthier) ~ ObsCore
Inputs from task-2 partners
+ users inputs, Atelier OV-Planéto 2010/2011

Complete draft June 2012?

Define IDIS-TAP protocol

Variation on TAP
Complements inspired from PDAP

Draft spring 2012

IDIS client

VO-Paris web portal (many protocols)
+ WebSampConnector
+ PDS client (recycled from Virtis experiment)

Demos on line

New resources

SSODnet
+ Object name resolver + Ephemeris server
AMDA complements
GhoSST + DM
VO-compliant data bases / computation services

Expected Nov 2012

On line

In progress

Prospects

DM completion

First version will only cover selected fields

(images, spectro, small bodies properties, plasma...)

=> to be completed by other participants

Will only provide minimal description of data

=> to be completed after end of EPN pgr, if need be (new ucd...)

EPN sustainability

What will happen after end of program?

=> Importance of services to users (as opposed to completion of DM)

No further opportunity in EU FP (no possible founding for development)

=> Join IVOA WGs to handle Planetary Science?

Teams interested in pursuing VO activity:

VO-Paris / CDPP / IPAG (from EPN)

IDES? LPG? (non EPN)

Software engineers + astronomer services required in laboratories:

based on experiments/modeling/processing + activity extended to VO interfaces

Foreign groups?
