

Début 9h30 Accueil

10h P. Le Sidaner module perl pour SIA/SSA

10h30 R. Haigron PosGis pour les requête SIA, le cutout en C, des logicie

10h50 Pause

11h T. Fenouillet : extraction d'une sub-image Fits

11h30 L. Domisse parser votable en C de J.C. Malapert

12h00 J. Berthier Experiences en Web-Services et clients, xslt pour transfo

12h20 Christophe Barache "scripts et outils OV pour réaliser des cross-ide

Pause déjeuner

Les clients

14h30 F. Boone Dalia logiciel d'interface pour les codes de simulation.

15h T. Boch Interopérabilité entre Aladin et d'autres applications clientes (

15h30 L. Michel Saada logiciel de création de BDD et publication dans l'O

16h F. Lepetit expérience sur Astrogrid et besoins complémentaires

Discussion : Quels besoins pour les projets en cours ou qui démarrent

Fin 17h

# Observatoire Virtuel

## module de votable en Perl

Difficile à trouver sur le web

Ecrit par Eric Winter [Eric.L.Winter.1@gsfc.nasa.gov](mailto:Eric.L.Winter.1@gsfc.nasa.gov)

Modifié par Igor Chilingarian [chil@sai.msu.su](mailto:chil@sai.msu.su)

Ce module permet de parser et d'écrire des  
votables en 1.0 et 1.1

Voir exemple

## Module SSA

### Prévision de réponse pour la votable

```
if($ssapVersion >= 0.9 && $ssapVersion < 10.0) {  
    $votable->set_version(1.1);  
    $votable->setNamespace("http://www.ivoa.net/xml/SpectralDataModel/v1.0","sdm");  
    $votable->setNamespace("http://www.w3.org/2001/XMLSchema-instance","xsi",0);  
    $votable->setNamespace("http://www.ivoa.net/xml/VOTable/v1.1","",0);  
} else {
```

### Structure à remplir pour la réponse

```
sub add_defSSAPfields() { # Early SSA implementation by Pedro Osuna  
    my $self = shift;  
    $self->add_fields([  
        {  
            ID          => "ObsId",  
            ucd         => "OBS_ID",  
            datatype   => "char",  
            arraysize  => "*",  
        },  
        {  
            ID          => "Reference",
```

### Module SSA (Igor Chilingarian)

### Gestion des version du protocole

```
sub add_SSAP09_required_fields() {
    my $self = shift;
    $self->add_fields([
        {
            ID          => "datasetType",
            datatype    => "char",
        }
    ], "required");
}

...

sub add_SSAP09_recommended_fields() {
    my $self = shift;
    $self->add_fields([
        {
            ID          => "logicalName",
            ucd         => "meta.id.assic;meta.dataset",
            datatype    => "char",
            arraysize   => "*",
            name        => "logical name",
            utype       => "sdm:SSA.Query.LName",
            group       => "sdm:SSA.Query",
        }
    ], "recommended");
}
```

### Module SSA (Igor Chilingarian)

#### Gestion des version du protocole

```
sub add_defSSAP09fields() {  
    my $self = shift;  
    $self->add_SSAP09_required_fields();  
    $self->add_SSAP09_recommended_fields();  
    $self->add_SSAP09_optional_fields();  
}  
....
```

## Module SSA (Igor Chilingarian)

### Gestion des erreurs

`qstat_error` : description of the error if it occurs

`qstat_overflow` : description of the overflow if it occurs

**Renvoie une votable**

....

\*

Module SIA (Igor Chilingarian)

**Inclus dans le module SSA**

```
sub add_defSIAPfields() {  
  my $self = shift;  
  $self->add_fields([  
    {  
      ID          => "ObsId",  
      ucd         => "OBS_ID",  
      datatype    => "char",  
      arraysize  => "*",  
    },  
    ...  
  ],
```

SSA Validator (Igor Chilingarian)

**Inclus dans le module SSA**

```
sub add_defSIAPfields() {  
    my $self = shift;  
    $self->add_fields([  
        {  
            ID          => "ObsId",  
            ucd         => "OBS_ID",  
            datatype    => "char",  
            arraysize   => "*",  
        },  
        ....  
    ],
```

## SSA

```
SSA
#!/usr/bin/perl
